E-learning Course

About the PV24 Construction Management Course

We look at key skills and focus areas that are beneficial in the lifespan and management of any project, including construction projects, that has a defined duration.

The focus is on three distinct time frames within the life cycle of a construction project (preparation, planning and execution) with each section consisting of four modules.

All modules are set up with two mini projects, being a Subsoil Drainage System and Concrete Lined Open Drains as the backdrop on a real project.

<i>Project for a road with drainage put out to subcontract.</i>	<i>Subsoil Drainage System assigned to the COTO Specification</i>	<i>Concrete Lined Open Drains assigned to SANS 1200 Specification.</i>

Parties to a Project (Module 1.2) is the second of twelve modules and forms part of the preparation phase of the construction project life cycle.

What is this course made up of?

After the introductory videos there is an in depth look at various transactions, identifying the relevant parties, culminating with a typical civil engineering construction project.

The course presentation is included as a free download which can be printed and used for making individual notes and adding comments.

The access duration for completion is one week and successful conclusion of the course will earn 0.2 CPD Points.

Who should attend?

Any construction professional who is employed within the built environment.

What is the expected Outcome of the course?

Identify and differentiate between the various parties and role players in a variety of transactions, ranging from day to day purchases to a typical civil engineering construction project.
